

BIostatISTICS MINOR

The minor in Biostatistics is designed to familiarize students with the statistical tools necessary to analyze health science data. By taking public health courses focused on the fundamentals of statistical methodologies and programming techniques, students will gain skills that enable them to be involved in the design and analysis of quantitative studies as part of their future professional career or graduate study in an applied field. There are 6 required credits for Masters students. Doctoral students will select electives in consultation with advisor and Director of Graduate Studies to complete the 12-14 credit minimum. Only one course may be taken S/N; all other courses must be taken A - F. Graduate credits can be applied toward either the major or the minor/other requirement, but not both.
